OHSAS 18001 System Implementation

**MAXIMISING EFFICIENCIES IN ORDER TO MAXIMISE
BUSINESS PERFORMANCE**

Introduction

Legislation requires that businesses manage their safety risk in order to ensure the safety of their employees. This is the first place that traditional safety practitioners and systems get wrong, in that they attempt to only manage this aspect of the requirements, instead of holistically attacking and managing the entire business to ensure true risk management through the management of all risk to the business.

Program Outline

GSRC have developed a holistic world class safety program which includes the development of risk assessments through to the training and appointment of people who will know what is required, when it is required and how it must be done.

Our program includes inter alia:

- Policy development
- Risk Assessment development and completion
- Control measures discussed and implemented after approval
- Development of procedures where required
- Training needs analysis
- Appointment of requisite personnel
- Development of evacuation procedures and plans
- Regular visits to audit
- Reports on successes and deviations generated after each visit
- 24 Hour hot line to assist with any and all queries or emergencies

Objective

With the implementation of this program it is envisaged that the client can rest assure that:

- The business is managing their SHE Risk and more
- All employees are protected as far as possible from harm
- All aspects of the business are operating in a legally compliant manner
- Peace of mind knowing that an experienced body is assisting with this process
- To improve efficiencies across the business that will ensure a maximisation of profit
